NANAM
FINANCIAL SERVICES LIMITED

The NANAM digital platform, ready to try.

A guided tour of the new website, customer portal and staff console: what each part does, how to test it yourself today, and what NANAM can switch on before full launch.

Website | Customer portal | Staff console | Mobile Money | Instant ID checks

Prepared for
NANAM Financial Services Limited

Edition
Pre-launch demo · October 2026

At a glance

One platform for the whole loan, from first click to final repayment.

Built specifically for NANAM's four secured loan products and the way a licensed money lender in Uganda works: collateral first, transparent pricing, and controls at every step.

Website

- Live loan calculator with the real pricing
- Online application with phone verification
- Document upload and an instant ID check
- 24/7 assistant plus WhatsApp hand-off
- Privacy, terms, loan terms and complaints pages

Customer portal

- Sign in with a code by SMS, no passwords
- Balance, next payment, schedule and history
- Pay with MTN MoMo or Airtel Money
- Statement any time, ready to save as PDF
- Track an application and upload documents

Staff console

- Portfolio dashboard with PAR 30 and aging
- Review → recommend → approve → disburse
- Loan book, collections, collateral register
- Automatic SMS reminders and receipts
- Roles, audit log, refunds and agents

4
loan products, priced the same transparent way

4
staff roles with maker-checker controls

2
Mobile Money networks: MTN MoMo and Airtel

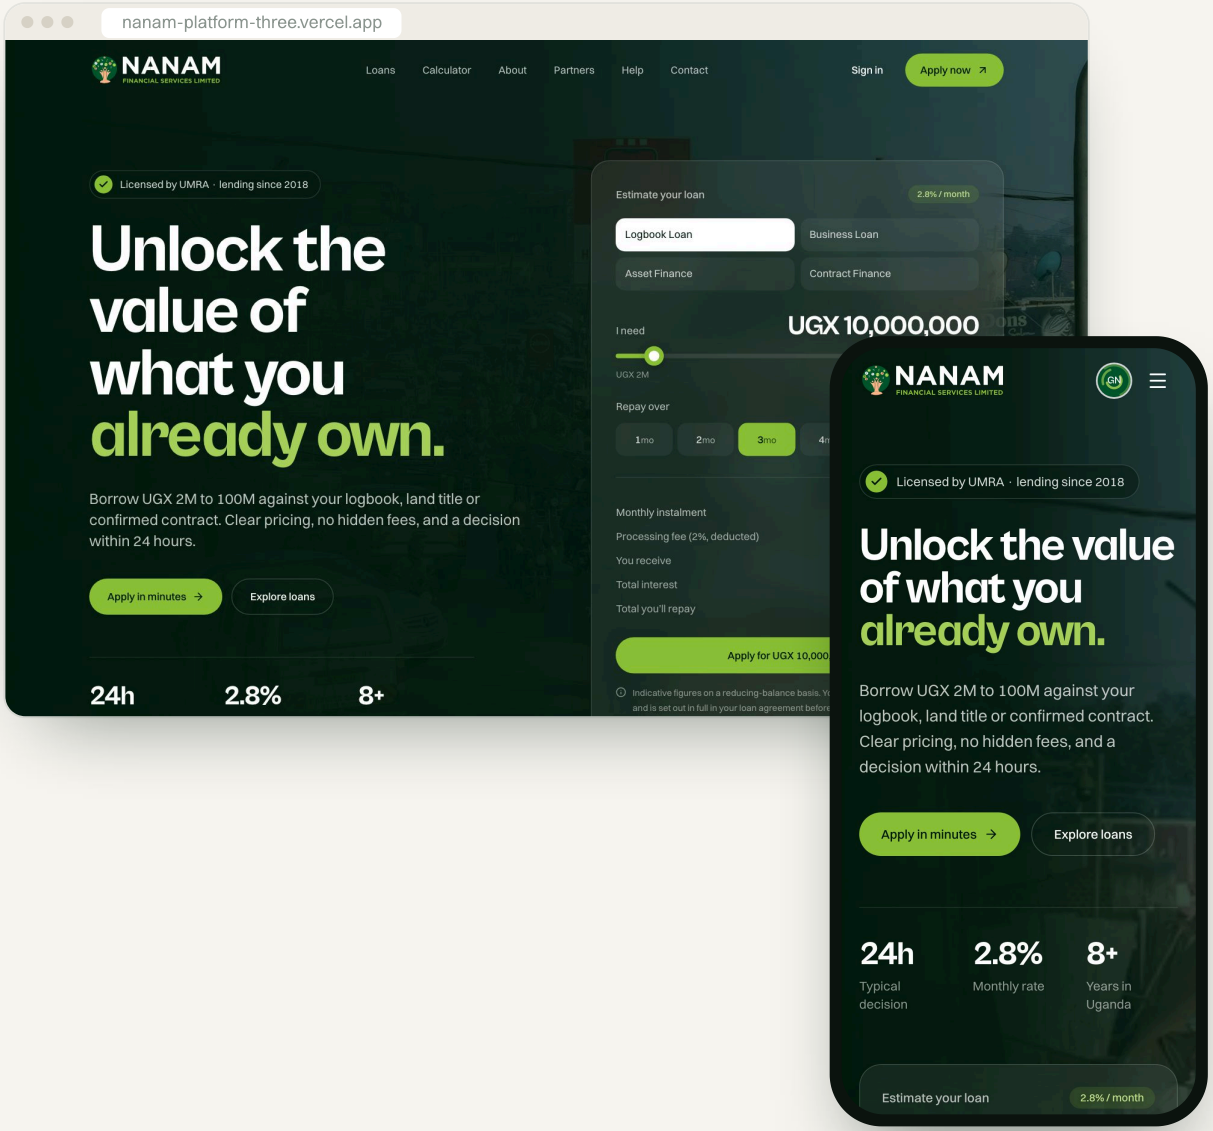

5
automatic SMS types, each fits one 160-character SMS

0 UGX
monthly cost for the website assistant

A front door that earns trust in seconds.

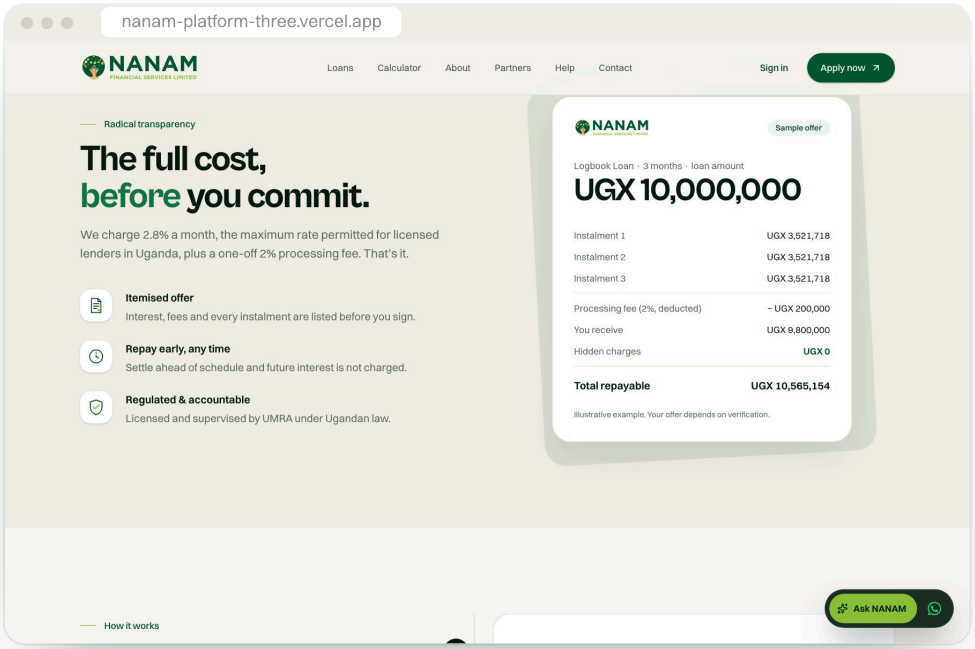

The first thing a borrower sees is what they can get and what it costs. Every figure comes from the same loan maths the console uses.

- **Live estimate on the homepage**: product, amount and term give the monthly instalment, the 2% fee, the amount received and the total to repay.
- **Product pages** for Logbook, Business, Asset and Contract Finance, each with its own documents checklist.
- **Built for phones first**: tested at every common phone width, from 320 to 430 px.
- **The UMRA licence** and the 2.8% legal maximum are stated plainly.

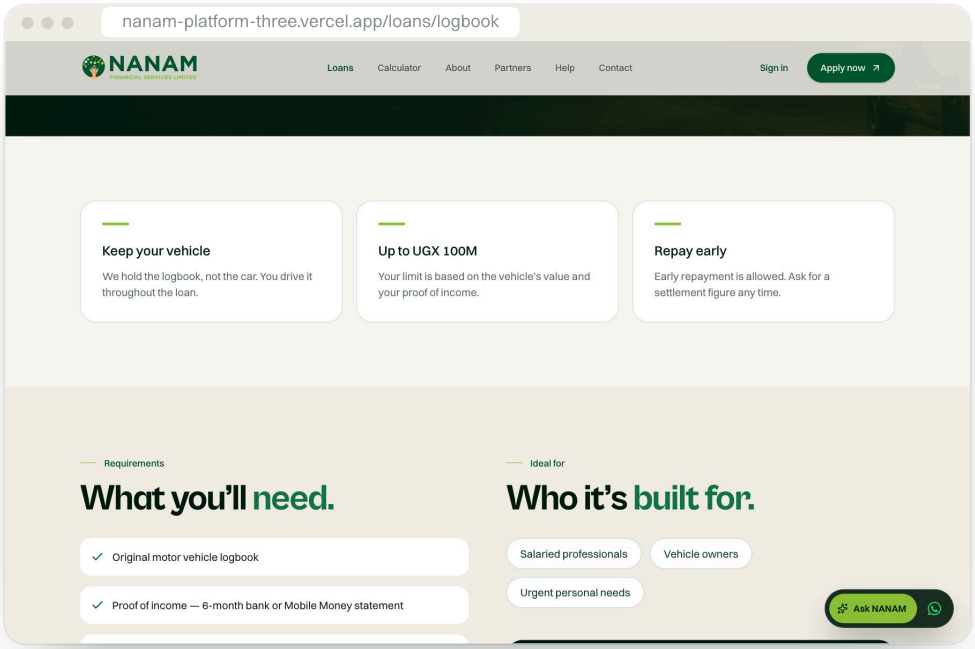

Clear pricing and products, before anyone applies.

Fewer "how much will I pay?" calls, and better-prepared applicants arriving with the right documents.

Itemised sample offer: every instalment, the fee and "hidden charges: UGX 0".

Each product page lists benefits, exactly what's needed, who it suits, and FAQs.

Logbook Loan

Against a motor vehicle logbook. The client keeps driving.

Business Loan

Working capital against a land title or motor vehicle.

Asset Finance

Buy land or a vehicle with 50% down.

Contract Finance

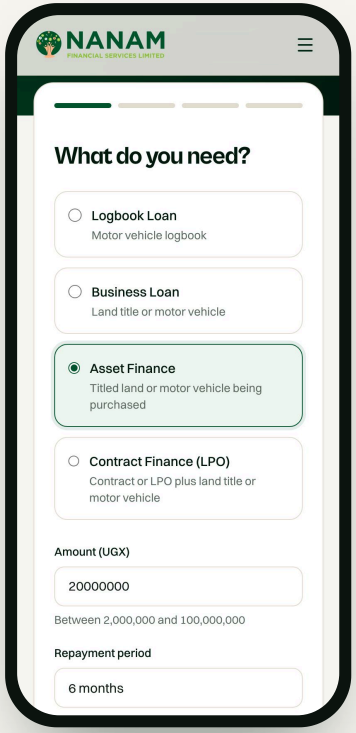

A confirmed contract or LPO plus a land title or logbook.

All four

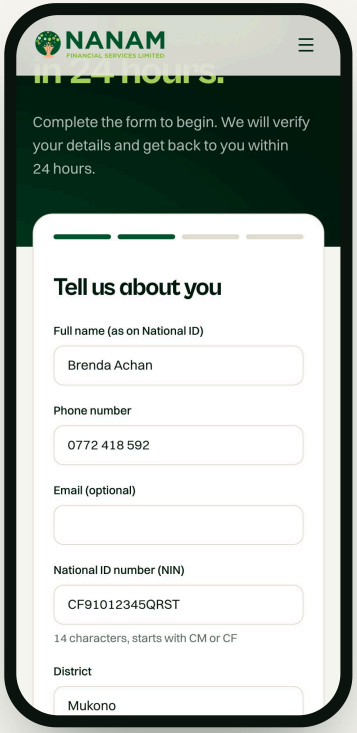

UGX 2M–100M · 1–6 months · 2.8%/month · 2% fee

Apply in minutes, from any phone.

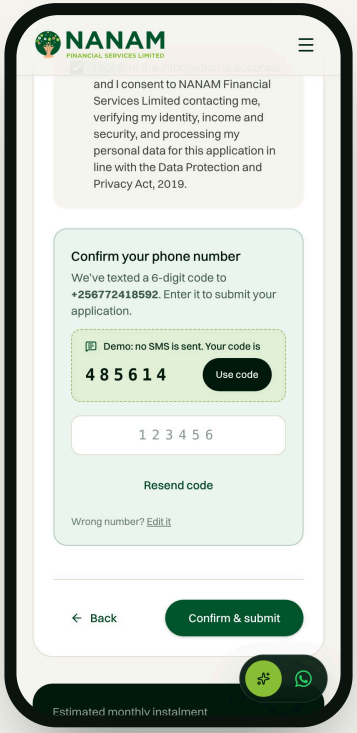

Four short steps. The phone number is confirmed with a one-time code, so staff only spend time on real, reachable applicants.

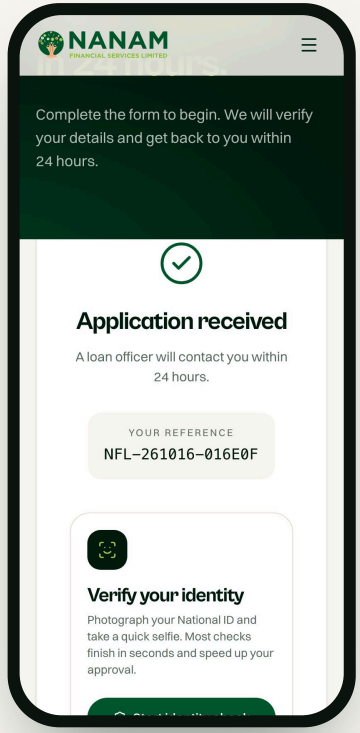

1 · Loan: product, amount, term and purpose, with a live estimate.

2–3 · About you: identity, district, income and security offered.

4 · Confirm: consent and a 6-digit code. In the demo it shows on screen.

Done: a reference, the identity check and document upload, straight away.

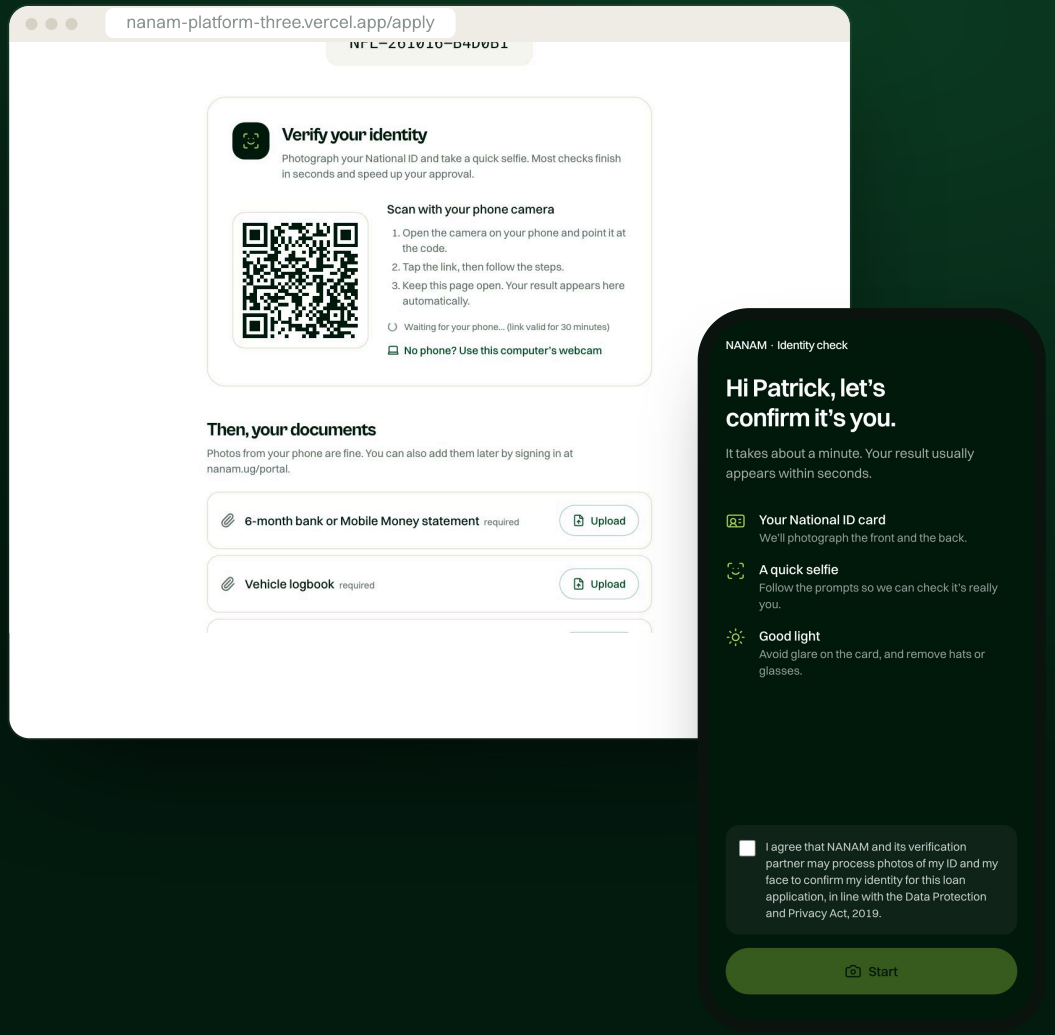

Protected by design: rate limits on codes per number and per network, a hidden bot trap, server-side validation of every field, and consent recorded with the application.

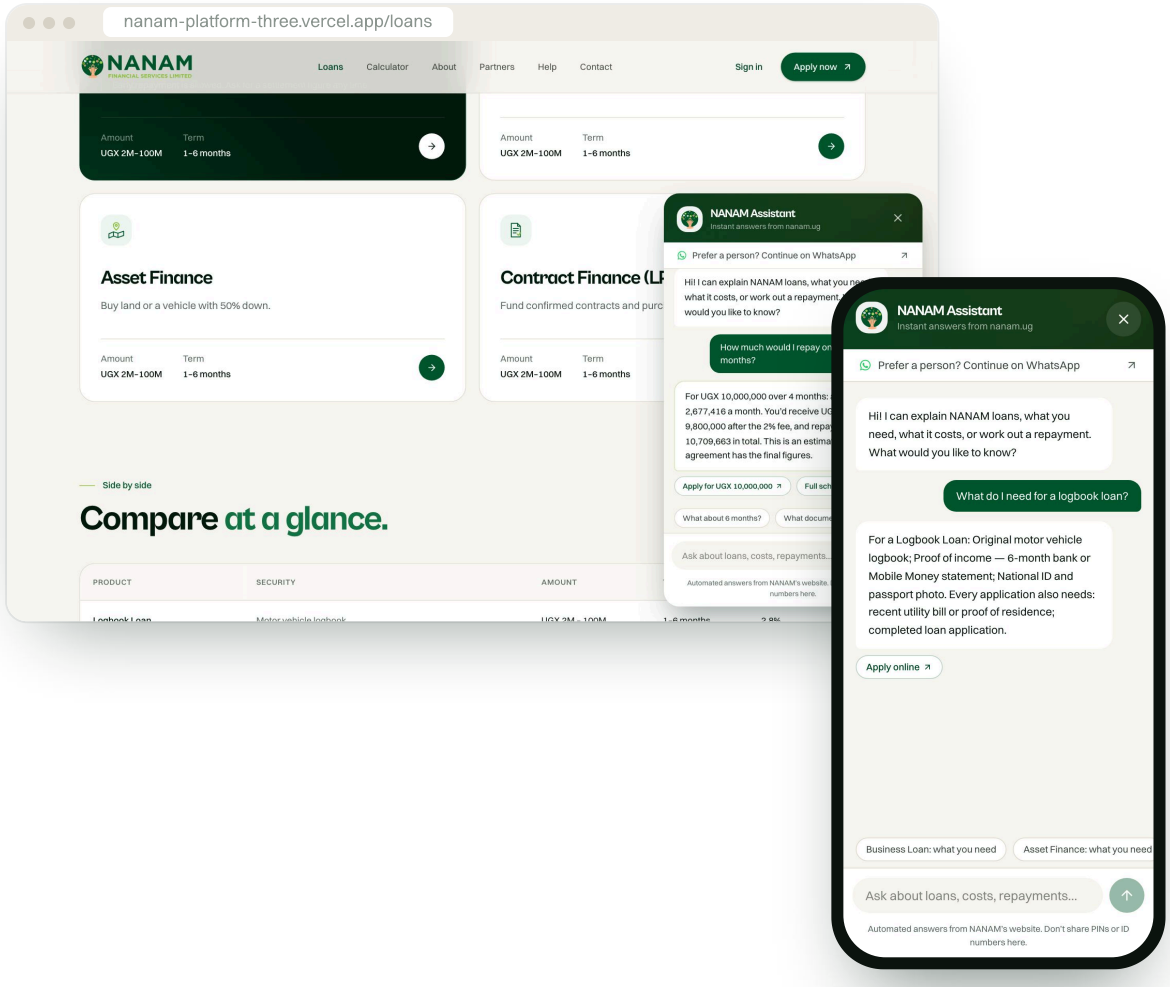

Verified in seconds, not days.

Straight after applying, the applicant photographs the front and back of their National ID and takes a guided selfie. On a computer, a QR code hands the camera step to their phone, and the result appears live on both screens.

- **Matched automatically**: the photo on the ID against the selfie, plus the NIN and name typed in the form.
- **A clear result: verified instantly, or sent to an officer for review**. Suspected fraud is blocked, and a bad photo asks for a retake.
- **Officers stay in control**: review, override, text a fresh link, or verify a walk-in client in person.
- **No disbursement** without a verified identity.

Provider: Smile ID Document Verification, used by banks and fintechs across Africa. The demo uses a built-in simulator that behaves like Smile ID's sandbox.

04 · Ask NANAM & WhatsApp

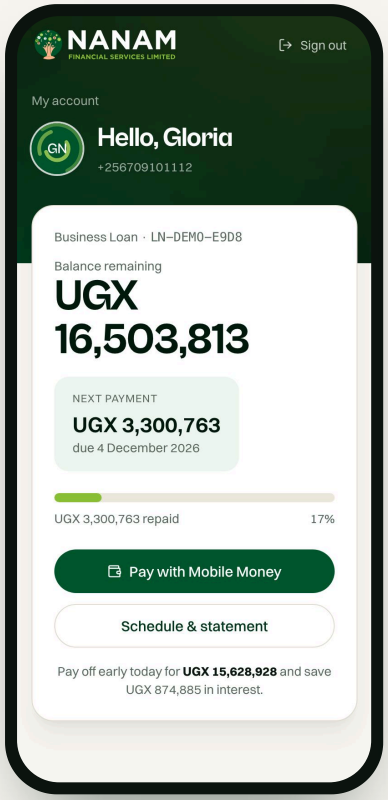

Answers at 2 a.m., at no running cost.

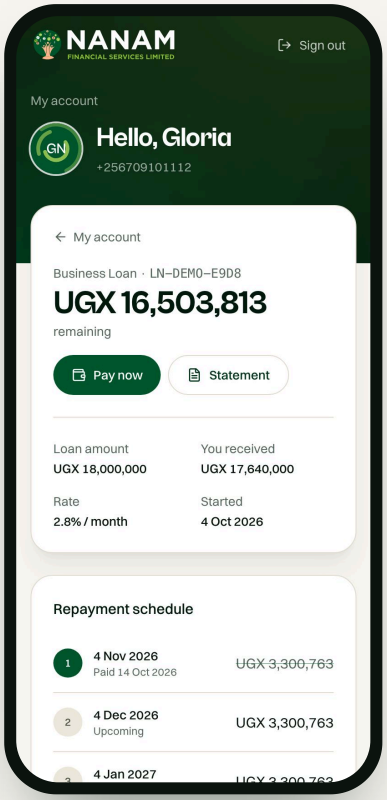

An assistant that answers only from NANAM's own verified content: products, documents, costs and how to pay.

- **Works out repayments** with the real loan maths ("10 million over 4 months?").
- **Understands common Luganda** words and everyday phrasing.
- **Refuses PINs and ID numbers** and warns about fraud.
- **Hands off to a person** on WhatsApp with one tap.
- **Runs in the visitor's browser**: no AI subscription and no data sent anywhere, so it can't invent answers.

Their loan, in their pocket.

Clients sign in with a code sent to their phone, with no passwords to forget. Routine questions ("what's my balance?", "when is my next payment?") no longer need a call or a branch visit.

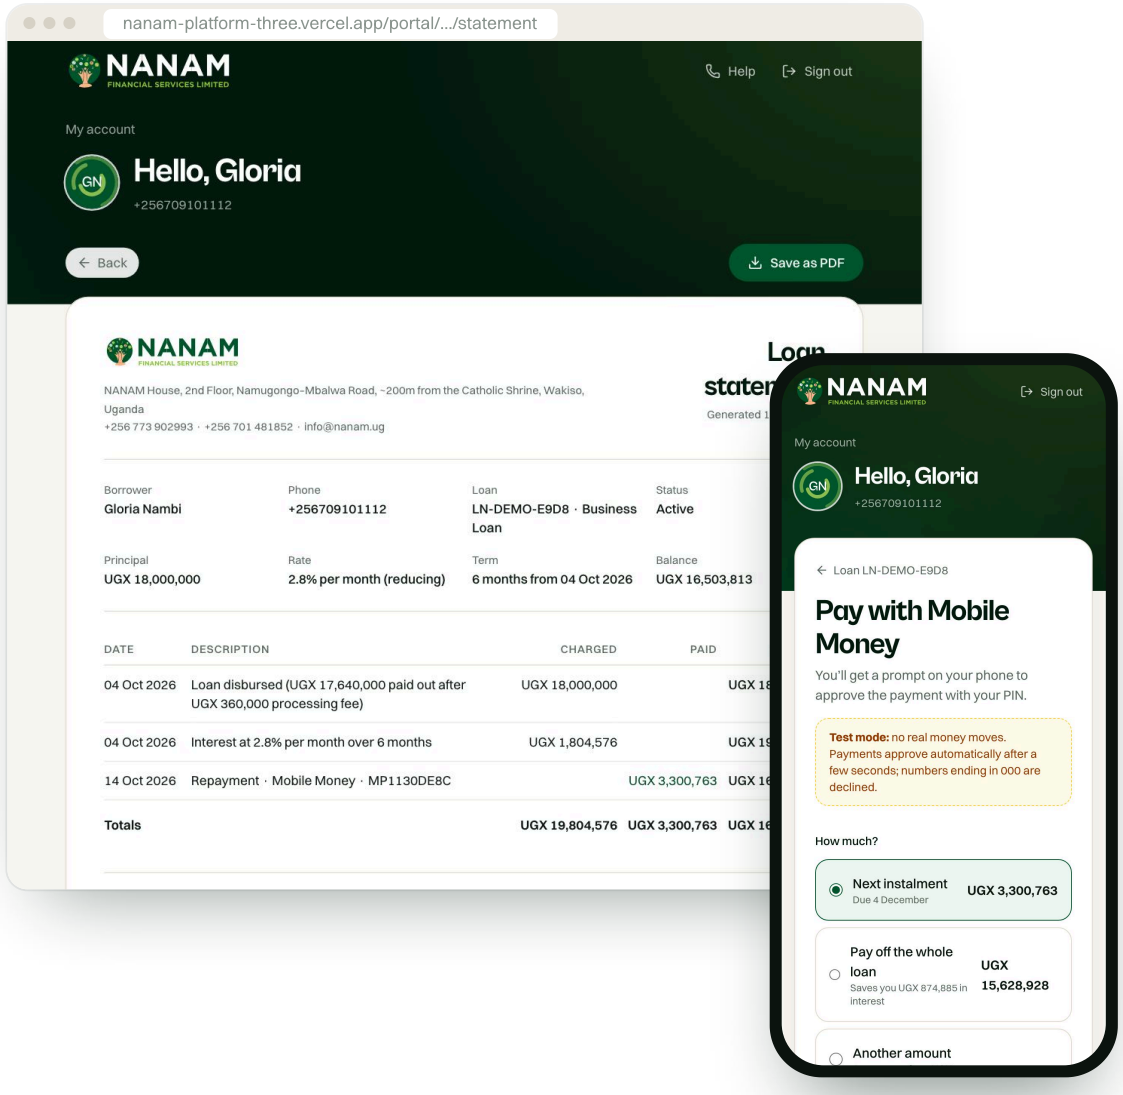

- **Overview**: balance, next payment, overdue warnings, progress and the saving from paying off early.
- **Schedule** with paid, upcoming and overdue instalments, and every payment received.
- **Application tracker**: received → under review → approved → funds sent.
- **Documents**: upload what's missing and see why anything was rejected.
- **Account recovery** for clients who change their number.

Security: codes are hashed, single-use, expire in 10 minutes and are rate-limited. The sign-in page never reveals whether a number belongs to a NANAM client.

Repay with MTN MoMo or Airtel Money, and it posts itself.

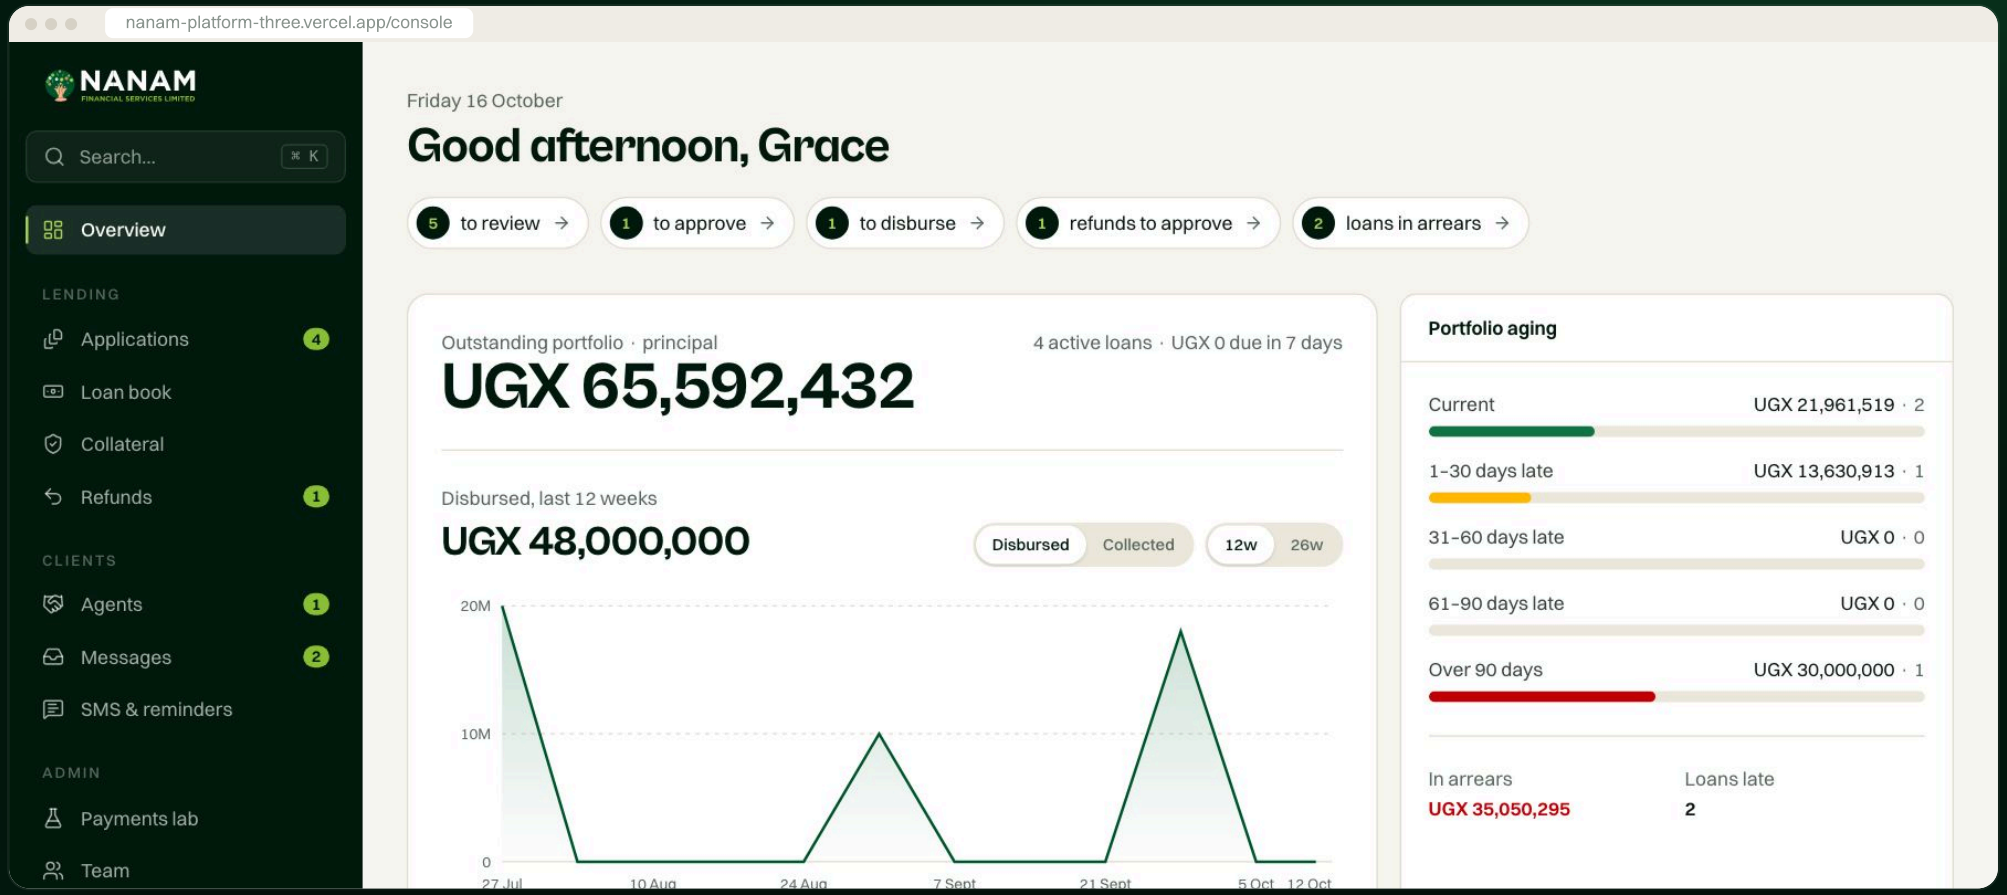

- **Pay the next instalment, the overdue amount, the full payoff or any amount**. The client approves with their PIN on their own phone.
- **Money posts only after the network confirms it**, then the client gets an SMS receipt with the new balance.
- **Safe by design**: duplicate payments are rejected, overpayments open a refund case, and a sweep re-checks anything unresolved.
- **Statements** reconcile every charge and payment down to a zero balance, ready to print or save as PDF.

Already wired up to MTN's and Airtel's official sandboxes. A **Payments lab** in the console tests each network end to end without touching any loan.

The whole portfolio, the moment you sign in.

Each person sees what's waiting on them: applications to review, approvals, disbursements, documents to verify, refunds and loans in arrears.

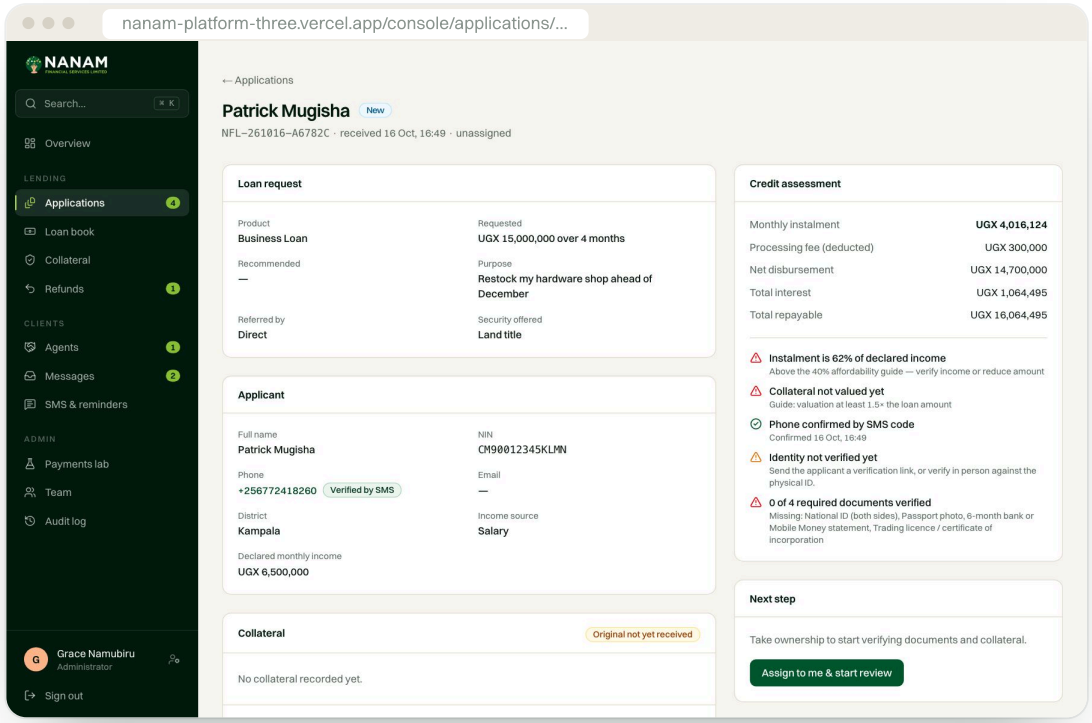

Every loan follows the same controlled path.

Each application page holds everything needed to decide: applicant, NIN check, collateral, documents, identity result, notes and an automatic credit assessment.

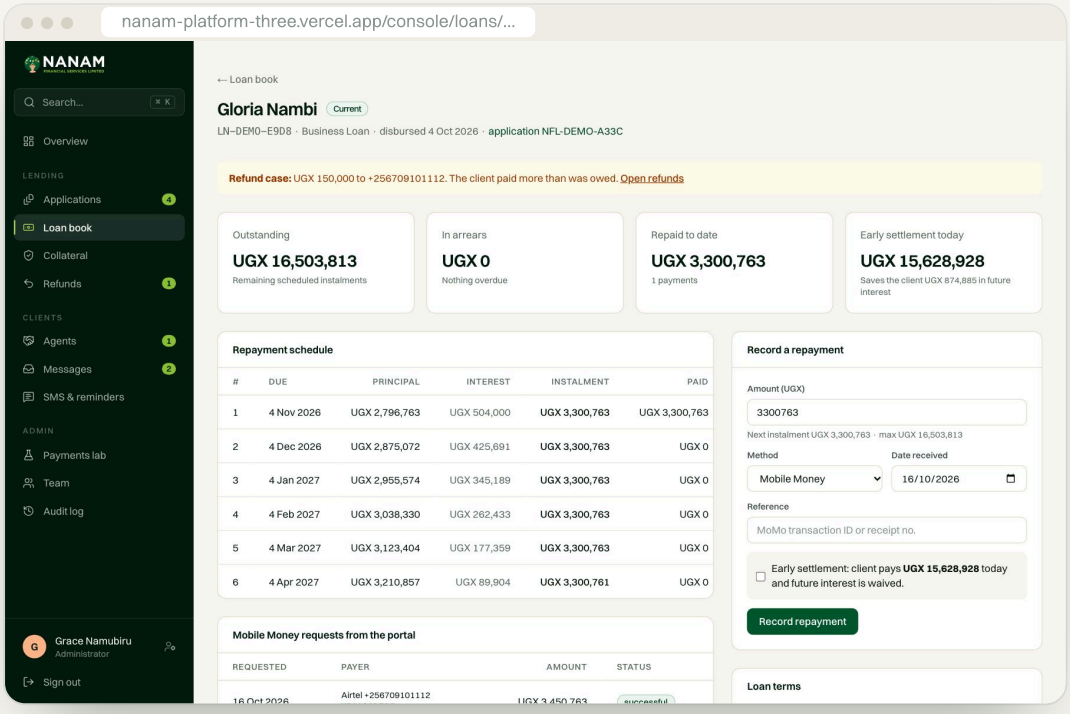

ROLE	CAN
Loan officer	Review, verify documents and ID, record collateral, recommend
Credit manager	Approve or decline (never their own recommendation)
Finance	Disburse approved loans, record repayments, pay refunds
Administrator	All of the above, plus team, audit log and payments lab

Built-in checks: instalment vs. 40% of income, collateral cover of at least 1.5×, verified ID, required documents. Disbursement is blocked until the original collateral is in custody.

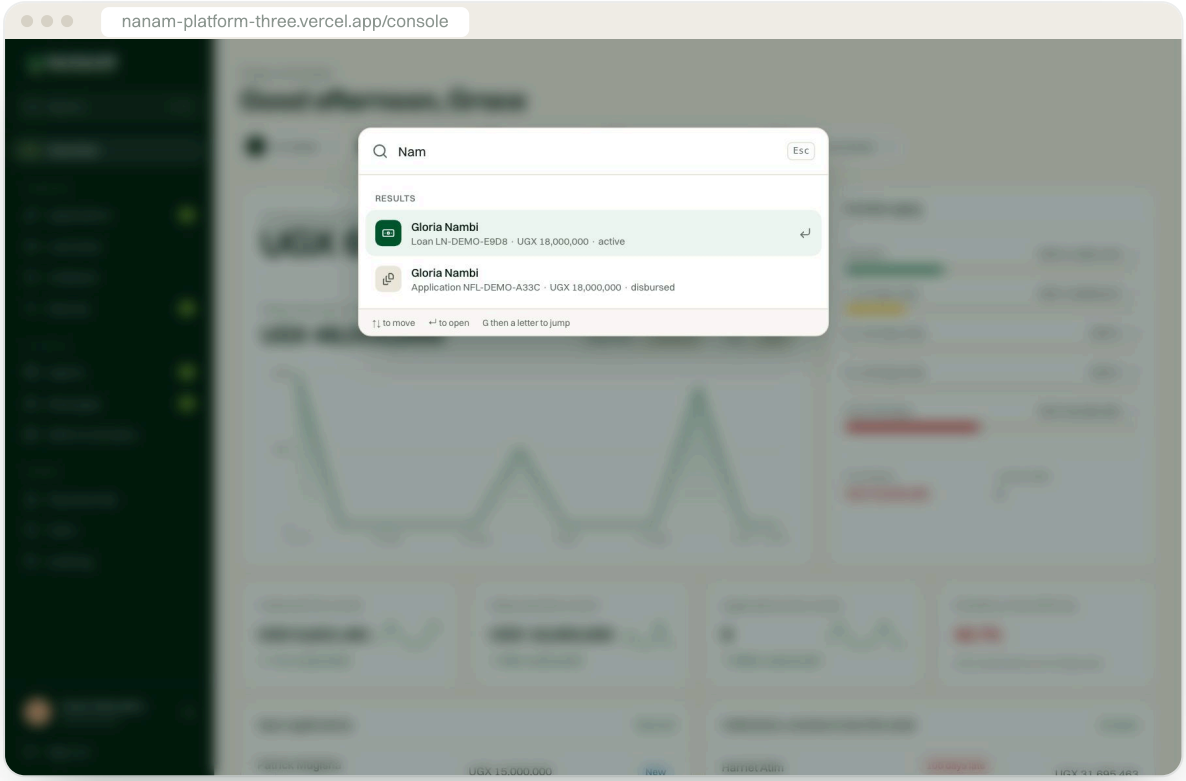

Collections that run themselves.

Schedules, arrears and reminders are calculated automatically, so the team spends its time on the clients who need a call.

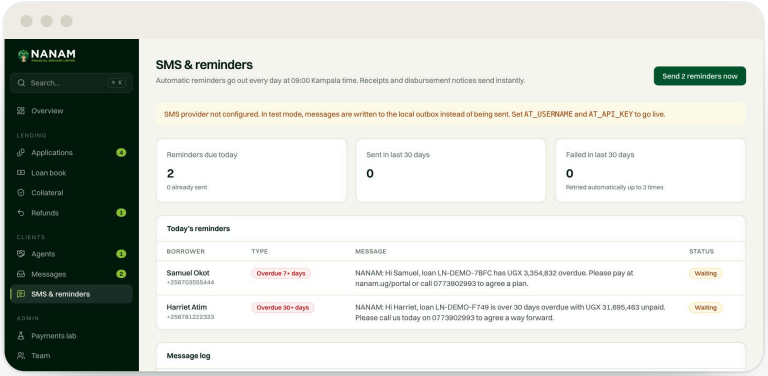

- **Repayments go to the oldest instalment first**. Early settlement waives future interest, and the console shows the payoff figure for today.
- **Automatic SMS**: 3 days before, on the due day, 1/7/30+ days overdue, receipts and disbursement. Never texted twice.
- **Collateral register**: logbooks and titles in custody, released only after full repayment.
- **Refunds**: overpayments open a case. A manager approves it and finance pays it, never the same person.
- **Agents**: partner referral links, with commission on each disbursed referral.

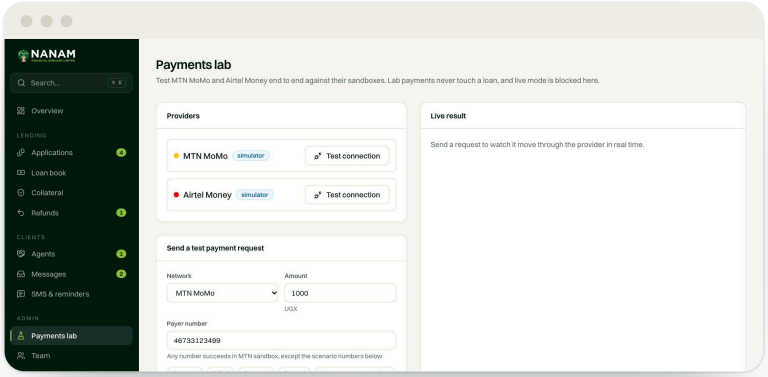

Fast to use, and every action leaves a trace.

⌘K search: find any client, loan, reference, phone number or NIN from anywhere. Keyboard shortcuts (G then a letter) jump between sections.

SMS & reminders: what goes out today, what was sent and what failed, with send-now.

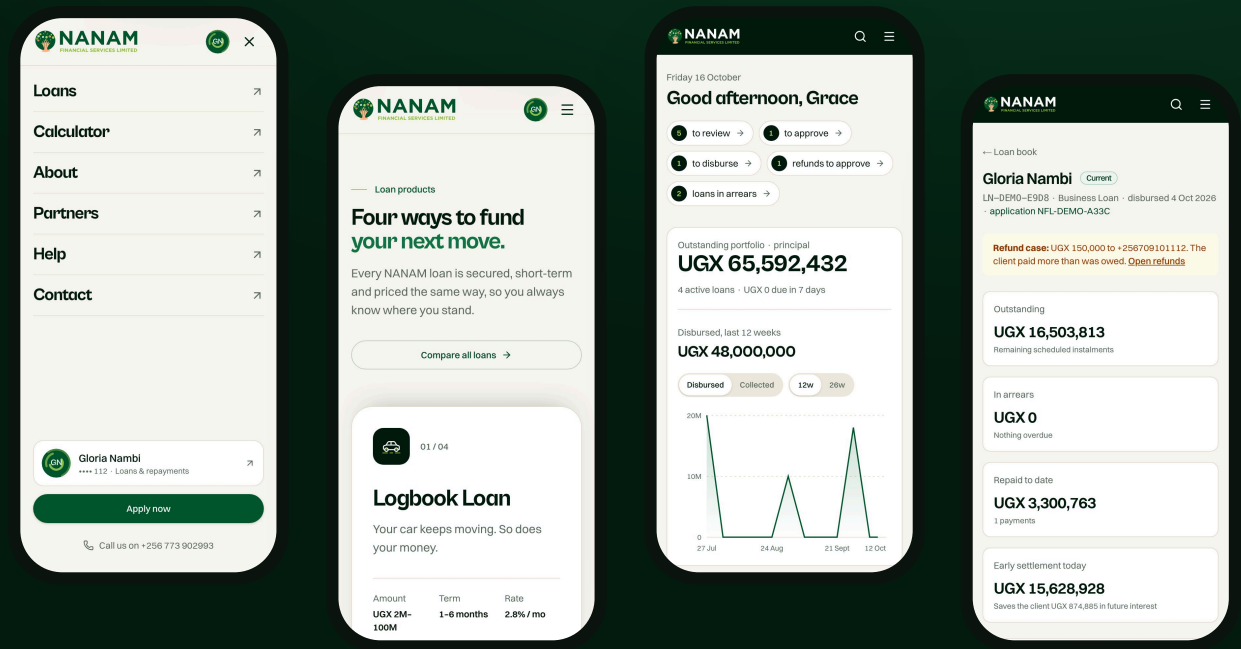

Payments lab: test MTN and Airtel end to end with live status, never touching a loan.

Most clients will meet NANAM on a phone.

Every page of the website, portal and console was checked at six phone widths, from 320 to 430 px: nothing scrolls sideways, buttons are big enough for a thumb, and forms don't zoom on iPhone.

- Full-screen menu and assistant
- Mobile Money pay flow designed for one hand
- Staff can approve, record and look up loans on the move
- Reduced motion respected, readable in sunlight

Built the way a regulated lender has to work.

Access

- Role-based permissions and maker-checker
- Hashed, httpOnly sessions; sign-in throttling
- Staff password reset by email link
- Disabled staff lose access immediately

Client data

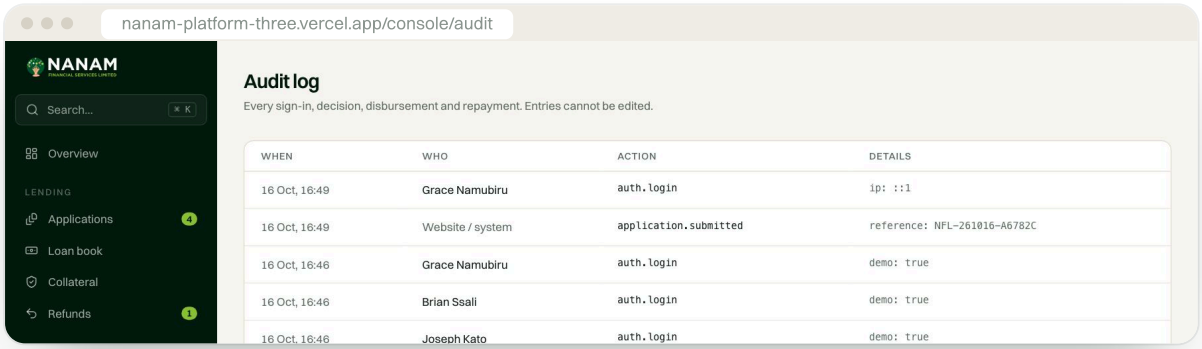

- Documents and ID photos in private storage, never public links
- Files checked by their real contents (JPEG, PNG, WebP, PDF)
- Every staff view of a document is logged
- Consent recorded with each application

Money

- Payments post only on provider confirmation
- Idempotent posting; duplicate references rejected
- Overpayments become refund cases
- Immutable audit log of every money movement

Regulation

- 2.8% per month, the legal maximum (Legal Notice No. 21 of 2024)
- Reducing-balance interest, fee shown before signing
- Privacy, terms, key loan facts and complaints pages
- Designed with Uganda's Data Protection and Privacy Act in mind

Audit log

Every sign-in, decision, document view and money movement is recorded with who did it and when, and it can't be edited.

The legal pages are drafts for NANAM's legal review. Items in [brackets] are for NANAM to complete, never guessed.

Fifteen minutes, end to end.

Open nanam-platform-three.vercel.app on a laptop, with your phone nearby. The lime **Demo** bar at the top means sample data: no real SMS, money or ID checks happen, and codes appear on screen.

A · Apply as a client

1. Open **/apply**, choose a product and amount.
2. Enter any name, a phone like `0772 555 123` and NIN `CM12345678ABCD`.
3. On the last step, tap **Use code** in the green demo box, then **Confirm & submit**.
4. Note your reference, then start the identity check.

B · Verify identity

1. On a laptop, scan the QR code with your phone camera.
2. Photograph the front and back of any card, then take the selfie.
3. Watch the result appear on both screens.
4. Try outcomes by applying with the surname `Twinley` (face mismatch), `Xeroxley` (officer review) or `Blurton` (retake).

C · Be a borrower

1. Open **/portal/login** and enter `0709 101 112` (Gloria, active loan).
2. Tap **Use code**, then **Sign in**.
3. Open the loan, then **Pay now**: pick MTN or Airtel and approve the simulated prompt.
4. Open **Statement**. Also try `0781 222 333` (Harriet, 100 days late).

Sample clients to try in the portal

CLIENT	PHONE	WHAT YOU'LL SEE
Gloria Nambi	`0709 101 112`	Active business loan, on time; an overpayment refund case
Harriet Atim	`0781 222 333`	Contract finance, 100 days in arrears: overdue warnings
Sarah Nakato	`0772 345 678`	No loan yet: an application in progress, with its tracker

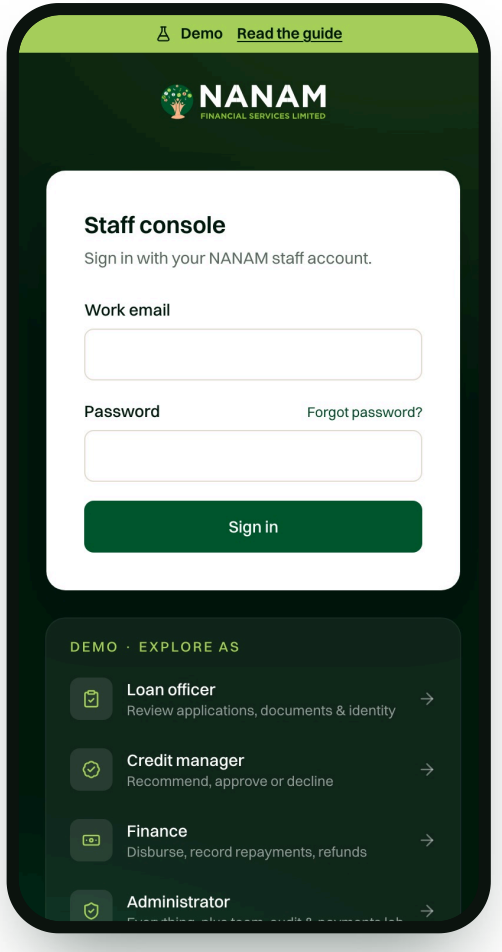

Good to know: the demo resets nothing automatically, so anything you create stays for others to see. Codes are limited to 3 per number every 15 minutes, just like the real thing.

Take your application all the way to payout.

Open **/console/login**. In the demo, the buttons under the sign-in card let you enter as any role with one tap.

1. **Loan officer**: open your application under **Applications** and tap **Assign to me & start review**. Add the collateral (e.g. a land title valued at UGX 40M), tap **Mark original received**, write a short note and tap **Recommend**.
2. **Credit manager**: open the same application. If the phone ID check from B wasn't done, use **Record identity decision** for an in-person check. Then choose **Approve**, give a reason and tap **Record decision**. Whoever recommended a loan can't approve it.
3. **Finance**: enter the payout method and reference, then **Confirm disbursement**. The repayment schedule and the SMS to the client are created automatically.
4. Open **Loan book** and record a repayment, or press ⌘K / `Ctrl K` and search a name.
5. **Administrator**: see the **Audit log** of everything you just did, the **Payments lab** and **SMS & reminders**.

Try the guard-rails too: as the loan officer, open **Team** (not allowed); as the manager, recommend an application yourself and then try to approve it; try to disburse before the original collateral has been received.

Switch it on in stages.

Everything is built. Each stage only needs NANAM's own account with the provider. The keys go into the hosting settings, with no code changes.

STAGE	WHAT GOES LIVE	WHAT NANAM PROVIDES	TODAY
1 · Online	New website, assistant and WhatsApp, online applications, staff console with the full credit workflow, collateral register, audit log	Domain (nanam.ug) pointed to the platform; an **SMS sender account** (e.g. Africa's Talking) for application codes; staff accounts	Working in demo
2 · Clients	Customer portal (balances, schedule, statements), automatic SMS reminders and receipts	Same SMS account; confirm the reminder wording	Working in demo
3 · Payments	MTN MoMo and Airtel Money repayments that post automatically	MTN MoMo and Airtel Money **collections** merchant accounts (business verification by each network)	Sandbox-ready
4 · Instant ID	Automatic National ID + selfie verification in seconds	A **Smile ID** account (in-person verification by officers works from stage 1)	Sandbox-ready
Always	Staff password-reset emails; production hosting	An email sender (e.g. Resend) on a nanam.ug address; a Vercel Pro plan for commercial use	Needs NANAM

Nothing blocks stage 1. Repayments can be recorded by staff and identities verified in person while the payment and ID accounts are being approved.

Before real clients: legal review of the draft policies, real staff accounts, removal of the demo switch and a fresh database.

NANAM
FINANCIAL SERVICES LIMITED

Ready when NANAM is. Try it today.

The demo is live and loaded with sample clients, loans and applications. Click through it as a borrower and as each member of staff. Nothing you do there touches real money or real people.
